SUMMARY

Software Engineer specializing in modern web applications using React, TypeScript, and scalable frontend architectures. Experienced in building responsive full-stack applications with Supabase and REST APIs, with strong focus on clean code, performance optimization, and AI-assisted development workflows.

EDUCATION

Bachelor's Degree at Computer and Information Sciences, Tanta University **September 2019**

Grade: Good

TECHNICAL SKILLS

Frontend Technologies: React.js | TypeScript | JavaScript (ES6+) | HTML5 | CSS3 | Tailwind CSS

State Management: Context API, Custom Hooks, Zustand

UI/UX & Styling: Tailwind CSS | Dark Mode Implementation | Mobile-First Design | Accessibility (A11y) | Semantic HTML | Responsive Design

Forms & Validation: Yup | Zod

API & Data Fetching: REST APIs, Axios, API Error Handling, Debouncing

AI-Assisted Development: ChatGPT, GitHub Copilot, Cursor AI for debugging, code generation, rapid prototyping, and development workflow optimization

Tools & Build: Vite, ESLint, npm, Git, GitHub

Backend Knowledge: Node.js, Express.js, Firebase, Supabase

KEY PROJECTS

Weather App | React 19 | TypeScript | Vite | Tailwind CSS | WeatherAPI Integration • [GitHub](#)

A weather application built with React and TypeScript, featuring real-time API integration and a responsive user interface.

- Optimized API calls by implementing debounced search, reducing unnecessary requests and improving performance
- Integrated Geolocation API to automatically detect user location and display accurate weather data

- Built a responsive UI with loading states and error handling to enhance user experience
- Developed a custom useWeather hook to centralize data fetching and state management logic
- Ensured type safety using TypeScript interfaces for API responses
- Structured the application using reusable components for scalability and maintainability

Nidaa - Prayer Times App | React 19 | TypeScript | Vite | Aladhan API • [Live Demo](#) • [GitHub](#)

A modern spiritual application providing accurate prayer times with location-based integration and real-time countdowns.

- Location-Based Integration: Implemented Geolocation API and a custom city selection system for accurate regional prayer timings.
- Developed custom usePrayerTimes hook managing real-time countdowns, prayer transitions, and API data fetching
- Built pixel-perfect, mobile-first responsive UI using Tailwind CSS with specialized prayer display components
- Utilized TypeScript interfaces for complex Aladhan API responses ensuring robust data handling
- Integrated smooth loading states and graceful error handling for seamless user experience

Movies Search Website | React 19 | TypeScript | Vite | [Live Demo](#) | [GitHub](#) | [TMDb API](#) | [Firebase](#) • **March 2026 - April 2026**

- Integrated The Movie Database (TMDb) API to fetch and display popular, trending, and searched movies with comprehensive details, cast information, and trailers
- Implemented secure authentication system using Firebase including signup, login, and session handling
- Built a persistent favorites system using Context API and localStorage improving user retention
- Optimized performance using lazy loading and efficient state updates
- Developed fully responsive and mobile-optimized UI using Tailwind CSS with modern design patterns
- Applied TypeScript throughout for type-safe API responses and component props
- Managed static assets in public directory with proper path routing for production deployment

Stellar Store | E-commerce Frontend | React 19 | TypeScript | Vite | [Live Demo](#) | [GitHub](#) | [Supabase](#) • [Tailwind CSS](#) | [Zustand](#) • **April 2026**

A production-ready e-commerce application showcasing advanced React patterns, state management, and backend integration.

- Built a scalable e-commerce platform with Supabase authentication (signup/login/session management) and PostgreSQL database integration
- Implemented Zustand for centralized state management handling cart, product filtering, and user preferences
- Developed full product catalog with advanced filtering, search, and product detail pages improving user discovery

- Created comprehensive shopping cart and checkout flow with payment integration and shipping management
- Built user profile system with order history and account settings using Supabase authentication
- Integrated Supabase Storage for product image uploads and management
- Designed fully responsive, mobile-first UI with Tailwind CSS
- Applied TypeScript for type-safe API responses and component props ensuring code reliability
- Implemented error handling, loading states, and optimistic UI updates for smooth user experience
